

RAC

12th December 2017

To whom it may concern,

The RAC provide roadside assistance for all of ARI Fleet's vehicles in the UK.

Earlier this year we were approached by ARI on the issues many of their customers were having with the diesel particulate filters (DPF's) on relatively new diesel light commercial vehicles. ARI's London vehicle fleets seem to suffer more problems in this area due to the "stop/start" journey patterns.

The RAC introduced ARI to Cataclean Global Limited and their fuel and exhaust system cleaner, Cataclean. In conjunction with Cataclean, the RAC designed a testing programme for one of ARI's customers on eight Peugeot Partner HDI vans operating in London. Following the test period the RAC concluded that the Cataclean treatment across the test vehicles improved the performance of the DPF's by 27%, reduced emissions across CO₂/HC/NO_x by 24% and improved fuel consumption by 9.7%.

ARI are very pleased with this initiative and continue to support the implementation of Cataclean treatments in their customer's fleets.

Yours faithfully

Chris Millward
