

# Wagtmans TRANSPORT

Sprundel, 25-02-2019

Dear readers,

Wagtmans Transport is a transport company with 1 truck, in other words a self-employed driver, who is always looking for points for improvement in terms of consumption and for products that are better for the environment.

Model truck: DAF XF 510

Engine cylinder capacity: 13.5 liters

Euro norm: euro 6

Year of construction: January 2016

Total number of kilometers driven to present: 396,000

The truck is only used for sea container transport, both heavy and light transport.

We had the opportunity to test the product CATA CLEAN. This is a fuel and exhaust system cleaner. After a test period of a few weeks, we were able to conclude that the truck is a lot brighter, accelerates better and is more economical. In figures we can note a decrease of 3.35% in fuel consumption.

This is a good result for a self-employed driver and certainly worthwhile to continue using this product. Furthermore, it is a good product and better for the environment so also for the future of transport.

We can therefore recommend everyone to use CATA CLEAN. We are very satisfied with this product. If in doubt, ask for a test so you can see for yourself what good results the product gives.

On behalf of Wagtmans Transport,

W.P. Wagtmans
